Ladies and Gentlemen, Welcome to our Football website, today we will explain step by step how our website works.

So first what you see is, our static home page, there are 2 buttons, the quiz button belongs to the dynamic part, and the overview button belongs to our content part.

First, let us start with the overview.

if you click on the overview button then you go down to the content part, at the beginning football is explained in general, then we have a History part, there is told who invented football and some other information, then it goes on with the biggest competitions, after that, the biggest awards are mentioned a bit, afterward the football rules are explained and finally we have listed the most expensive players in 2021, then we continue with our contact part by clicking on the contact form button, a new page opens and you can enter your datas there and send us an e-mail we used a web api for that, now we will show you an example… the accounts of our website are linked there (Twitter, Facebook, GitHub). There is our GitHub repo. Now we will scroll up and then Abdal will continue with the dynamic part of our website.

So, there are 3 buttons, the first one is the play button where the Quiz starts, we prepared 10 questions, then we have the high scores button, where the name and the score are saved, and the last button is the return button to our main website.

sSo, when we click on the play button you will get a question and 4 choices and one of them is true, at the top right side, you will see your current score and at the top left side, you will see how many questions you went so far.

So, let us move on with the questions (do you want to go through the questions together?) … so, when you finished with the quiz, you will be asked to enter your name to be saved in our database, when you write your name now and click save then it will open the leader board page and so you will see your name and your score., but that is completely optional, also you can play again or go home. Our Website is responsive as well.

So that was our website, we hope you liked our website and thank you for your attention.
